Re: Submission in *NABR v. United Airlines et al.* Docket No. DOT-OST-2018-0124

Dear Madam Secretary:

We are submitting this letter to provide the Department of Transportation (DOT) with information that may be relevant to its evaluation of the above referenced complaint, which alleges that various airlines refuse to carry animals for critical biomedical research, but carry animals for other purposes.

We breed NHP designated for biomedical research and drug development. Several very important discoveries were done with the help of animals grown by us in the field of MS, Parkinson and brain research – those discoveries helped till today millions of human patients.

Like many others, we would prefer that the research performed to address [this disease etc] be done without the need to use live animals. Many of our researchers must rely on live-animal research to safely develop these treatments. At the same time, current laws and regulations require this kind of research before life-saving medicines and treatments may be approved.

According to the complaint, many airlines refuse to transport animals for these vital scientific discoveries, although the airlines will transport the same animal for non-research purposes, such as for zoos or as pets. We believe that as long as the government requires this research, it should enforce its laws in a way that does not undermine these essential research requirements. This arbitrary delineation by the airlines - which we understand has no transportation related purpose - threatens the progress of key research, research which could reduce or even eradicate [disease etc].

We urge the DOT to investigate the complaint filed by NABR and to require all airlines to eliminate policies which discriminate against animal carriage and instead base carriage solely on the fact that the purpose of the transportation of animals is for legal, legitimate, necessary and essential life-saving biomedical research. We respectfully request that DOT take these actions to ensure the continued progress of essential medical research.

Sincerely,
Dr. Moshe Bushmitz
Veterinary Manager BFC Israel
